Great Gift for Any Angler!

LOST STREAM MAP

The STREAM & LAKE MAP OF NEW YORK resembles another map-- known to Pennsylvania anglers as the "Lost Stream Map."

It was completed in 1965 after a 30 year effort by Howard Higbee, a former Penn State Professor.

Professor Higbee painstakingly plotted by hand, the location of 45,000 miles of streams onto the map. It sold extremely well - until the printer declared bankruptcy and hauled Higbee's work to the landfill.

But reprints were impossible because the maps were printed in non-photographic blue. Higbee was even offered \$400 for one of his last maps. And state agencies were forced to keep their copies under lock and key.

Then, at the age of 91, Howard Higbee's dream came true. Computers made it possible to reprint the map.

Then the STREAM & LAKE MAP OF NEW YORK was created.

Why every angler and boater needs this map

Professor Higbee's® Stream & Lake Map of New York is the first and only highly detailed map of its kind. The 3.5-foot-by-4.5-foot New York map shows 65,000 miles of streams plus lakes.

For a limited time -- get 3 bonuses with each map

Armed with the information in this new and exclusive 24-page report--you could be in for the fight of your life.

RAVE REVIEWS

"It is in showing where to find out-of-the-way trout streams that makes the map such a treasure to the fisherman."

—Joe Gordon, TRIBUNE-DEMOCRAT, Johnstown, PA

"I have one of the original Higbee's Stream Map of Pennsylvania on my wall behind my desk. It's the best thing available as far as streams are concerned. I use it all the time for reference. I don't know of anything more extensive and it is the most accurate map out there as far as streams are concerned."

—Dave Wolf, PA Fish and Boat Commission

THE OTHER ANIMAL IN OUR MARSHES

By Douglas H. Domedion

The otter has been absent from this end of the state, but now he back!

They haven’t been in this area for a very long time, over 100 years. During the mid-1800s, this animal began to decline throughout the state. Deforestation, polluted water and unregulated trapping were responsible for eliminating them. Their last strong hold was in the Adirondacks, Catskills and the Hudson Valley. In 1936 the trapping season was closed on them and wasn’t resumed until 1945 with more restrictive seasons and bag limits. Still this animal was limited to the above mentioned areas. Then in 1994, the River Otter Project came to into being. It was a cooperative effort by both the NYS DEC and concerned citizens. The River Otter Project folks raised \$500,000 for expenses, and trappers volunteered to live trap otters in the above mentioned areas. Over the course of the project 279 otters were caught and then released at 16 sites in Western NY. None were released in our swamps as the trappers here voted against it. They use a large killer type trap for winter trapping of muskrat here and the trappers felt that they would be killing some of them if they were released here. The project was a huge success and we now have this unique animal well established in this end of the State. Does that include our local refuge areas? Yes, they eventually migrated into our local swamps and otter sign has been present here for a number of years now.

You would think that a guy like me who travels around this area with his camera a lot would have see one, but nope. No luck, but I do see the sign. In Western NY a few are accidentally taken each year by beaver trappers using killer type traps which is bound to happen as there is a close relationship between beavers and otters. When going to college in the Adirondacks I trapped, but never caught an otter and only seen one and that wasn’t a very good observation. Maybe some day I’ll lucky and get my camera on one in our local refuges.

The river otter is a very unique and interesting animal with a very short, dense and glossy fur. Running your hand over the fur reminds you of a fine piece of velvet. Their streamlined, but stout body, fully webbed feet on short legs, broad and flattened head and muscular tail all serve to assist in swimming and foraging. Their eyes, ears, and nose are located on the top of the head, so they can see, hear, and smell while most of their body remains in the water. That beautiful fur can range from black to light brown with the area under the neck and head being lighter. Males are larger than the ladies and range 35 to 50 inches long with weights of 10 to 30 pounds. River otters can stay underwater for up to eight minutes and can close their ears and nostrils to keep water out. They can also dive to a depth of 60 feet!

They usually hunt at night and feed on whatever might be available. Fish are a favorite food, but they also eat amphibians, turtles, crayfish and even muskrats and waterfowl. They have a third eyelid, or nictitating membrane, that protects the eye and allows the him to see when swimming underwater. There are also long, stiff and highly sensitive facial whiskers that aid in locating and capturing prey.

Being that river otter is at the top of the food chain, they have a greater chance of being exposed to elevated levels of environmental contaminants such as PCB, DDT and heavy metals; such as cadmium and mercury. As contaminants accumulate in the organic materials and sediments on the bottom of a waterway, they become ingested by aquatic invertebrates such as snails, mussels, and insects. These are in turn consumed by fish, which may then be eaten by larger fish, all of which are consumed by river otter. This accumulating effect results in elevated levels of pollutants in river otter due to the ingestion of contaminated food items. At such high levels, some of these contaminants can have negative impacts on otter ranging from poor survival to sterility or infertility. By keeping a close eye on the otter we can tell if there could be a problem in the environment.

Gee, there are so many neat things about the river otter I will just have to continue about this marvelous animal into next week’s column!

My contact information is 585-798-4022 or woodduck2020@yahoo.com. Always interested in eagle and snowy owl sightings! (and now otters!)

Healthy Choices

——— Your guide to looking and feeling your best ———

Do you have HEEL pain or ARCH pain?

HEEL SPUR SYNDROME/PLANTAR FASCITIS

is a common problem among people who are active. It starts as a dull intermittent pain in the heel which may progress to a sharp persistent pain. Classically, it is worse in the morning with the first few steps, after sitting, after standing, or after walking.

- Plantar fasciitis often begins with irritation and tearing of the fibrous band of tissue on the bottom of the foot, which may eventually result in the formation of a heel spur.

- Contributing factors: flat pronated feet, high arched feet, poor shoe support, increased age, sudden weight increase, increased activity level, family tendency.

- Approximately 2-3 times your body weight of force is exerted on each foot with walking. Flexible, non-custom molded arch support found at those advertised shoe stores cannot support these forces and usually do not provide long-lasting relief, do not come with a lifetime warranty, and are typically more expensive than custom-molded ones made by our office.

- 95 percent of our patients symptoms are resolved with conservative treatment, avoiding surgical intervention.

- We also offer surgical procedures with the best post-op success rates using Endoscopic Plantar Fasciotomy techniques and **EPF** resulting in minimal incisions and scarring, immediate ambulation and often back in a shoe in one week.

If you can't remember when your feet didn't hurt, now is the time to give us a call!

Signs of a HEART ATTACK

Some heart attacks are sudden and intense, but most heart attacks start slowly, with mild pain. Often people affected aren't sure what's wrong and wait too long before getting help. Symptoms include:

CHEST DISCOMFORT. Most heart attacks involve discomfort in the center of the chest that lasts more than a few minutes, or that goes away and comes back. It can feel like uncomfortable pressure, squeezing, fullness or pain.

DISCOMFORT IN OTHER AREAS OF THE UPPER BODY. Symptoms can include pain or discomfort in one or both arms, the back, neck, jaw or stomach.

SHORTNESS OF BREATH with or without chest discomfort.

OTHER SIGNS may include breaking out in a cold sweat, nausea or lightheadedness

Women are somewhat more likely than men to experience other common symptoms, particularly **SHORTNESS OF BREATH, NAUSEA/VOMITING, AND BACK/JAW PAIN.**

If you or someone with you has one or more of these signs, don't delay!

Call 9-1-1 immediately!

SIGNS OF A STROKE

Sometimes symptoms of a stroke are difficult to identify. The stroke victim may suffer severe brain damage when people nearby fail to recognize the symptoms of a stroke. Now doctors say a bystander can recognize a stroke by asking a few simple questions:

1

Ask the person to **SMILE**.

3

Ask the person to **RAISE BOTH ARMS**.

2

Ask the person to **TALK AND SPEAK A SIMPLE SENTENCE**. i.e. It is sunny out today.

4

Ask the person to **STICK OUT HIS TONGUE**. If the tongue goes to one side or the other, that is a sign of a stroke.

OTHER STROKE WARNING SIGNS

- Sudden **numbness or weakness** of the face, arm or leg, especially on one side of the body
- Sudden **confusion**, trouble speaking or understanding
- Sudden **trouble seeing** in one or both eyes
- Sudden **trouble walking, dizziness**, loss of balance or coordination
- Sudden, **severe headache** with no known cause

If you or someone with you has one or more of these signs, don't delay!

CALL 9-1-1 IMMEDIATELY!

The Choice For Staying Put or Moving On

Many home improvement television series showcase people deciding whether to improve upon their current homes to make them into the houses of their dreams or to put "for sale" signs in their lawns and move on to something new.

The question of whether to move or stay put depends on various factors. Such factors may include emotional attachment to a home, the current economic climate and the cost of real estate. Current data points to a greater propensity for people to invest and improve upon their current properties rather than trading up for something new.

According to information collected by John Burns Real Estate Consulting, the percentage of homeowners moving up to their next home is the lowest in 25 years. Many are opting to make starter homes permanent by expanding them and repairing homes for the long haul.

The National Association of Realtors said that, between 1987 and 2008, home buyers stayed in their homes an average of six years before selling. Since 2010, however, NAR says the average expected length of time people will stay in their homes before selling is now 15 years.

Part of what's fueling this permanency is that many home buyers were able to acquire rock-bottom mortgage interest rates shortly after the 2008 recession. As a result, they're not inclined to walk away from those rates, even if doing so means getting more house. Also, a low inventory of available houses has stymied repeat buying for many people.

Those factors and others have led many homeowners to invest in renovations instead. Very often a smarter layout and more efficient floor plan can make meaningful differences in spaces. Renovations and redesigns can make sense and often are less expensive and disruptive than moving. ■

Did You Know?

Credit scores are important factors when lenders determine if individuals applying for credit or loans are worthy borrowers. Credit is used when purchasing a new home, buying a car, opening a business, or applying for new credit cards. A credit score is a three-digit number that corresponds to a certain range. The standards were established by FICO®, and the higher the score, the better (scores start at 300 and move upward to 850). Various things can impact credit score, and some weigh more heavily toward the final score than others. The following are the factors that influence credit score in order of their importance, according to Wells Fargo bank.

- Payment history (making payments on time)
- Current debts (carrying high balances)
- Credit history
- New credit application inquiries
- Types of current credit (mixed forms of loans, credit cards, etc.)

Tips on how to write CLASSIFIED ADS that sell!

- 1 USE A KEY WORD.** This immediately tells the reader exactly what you have to sell.
- 2 Make your description CLEAR AND FACTUAL.** State the year, make, model, color & size and tell what condition the item is in. Also, state the special features.
- 3 STATE THE PRICE.** Successful classified advertisers have learned that the price in an ad helps increase the chances for results.
- 4 IF THERE IS A GENUINE SENSE OF URGENCY,** say so. The words "We're moving," or "Must sell fast," suggest that readers respond immediately.
- 5 INCLUDE YOUR PHONE NUMBER.** Classifieds get results fast and often generate immediate sales. If you cannot be available to answer the phone at all times, be sure to specify special calling times such as "after 9pm" or "before 11am."

How to Invest in Gold and Silver

Gold, silver and other precious metals have been used as currency throughout history. Paper money is a relatively recent method of payment, one that requires a certain level of faith among consumers. But that faith in paper currency has waned in recent years, and there are many people who are once again investing in gold and silver.

Gold and silver still have a position of great financial importance in today's market. With the value of a dollar fluctuating, precious metals may make a more stable investment. But investors who plan to investigate gold and silver should consider a few things before making their decision.

- **Look into bullion.** Gold and silver bullion are made from 99 percent of the total metal. This helps stabilize the cost and is not dependent on some of the fees or price fluctuations resulting from coins issued by various government institutions. Keep in mind that investing in bullion can be expensive and will require a high initial investment outlay. Also, you will have to find a secure method of storing and protecting the metal. Also, bullion can be more difficult to acquire than other forms of gold and silver, so it may require more leg work for investing.

- **Purchase coins.** One of the easiest and safest ways to invest in gold and silver is to buy coins. These will be minted from pure metals and are often issued through government-backed mints. Although gold coins aren't widely circulated, silver coins contain enough whole silver mixed with other alloys to make them valuable.

- **Consider mutual funds.** Rather than purchasing gold or silver outright, you can invest in mutual funds that then allocate a bulk of the fund's investment into the purchase of gold or silver. This requires less knowledge of metal markets and also less work. However, it still enables you to invest in gold and silver.

- **Sell scrap jewelry.** While you may not get the full value of the jewelry, you can take advantage of the rising rates of gold and silver by selling off items you may not use. Selling extra jewelry requires little work on the part of the seller. ■

Soup & Sandwich Makes the Ideal Lunch Combo

Few things are better together than hot soup and a favorite sandwich for lunch or a light dinner. This combination is the ideal comfort food, and the variations are as endless as a person's imagination.

Mozzarella Sandwiches

Makes 4 servings

8 slices day-old bread, crusts removed	1/2 cup pitted black olives, chopped
3 1/2 ounces mozzarella cheese, thickly sliced	4 eggs, beaten
8 canned anchovy fillets, drained and chopped	2/3 cup milk
16 fresh basil leaves	Oil for deep-frying
	Salt and pepper

Cut each slice of bread into two triangles. Top eight of the bread triangles with the mozzarella slices and chopped anchovies. Place the basil leaves and olives on top and season with salt and pepper to taste. Lay the other eight triangles of bread over the top and press down around the edges to seal.

Mix the eggs and milk and pour into an ovenproof dish. Add the sandwiches and leave to soak for 5 minutes.

Heat the oil in a large pan until a cube of bread browns in 30 seconds — the oil will then be hot enough for deep-frying. Before cooking the sandwiches, squeeze the edges together again.

Carefully place the sandwiches in the oil and deep-fry for 2 minutes or until golden, turning once. Remove the sandwiches with a slotted spoon and drain on absorbent paper towels. Serve immediately while still hot.

Creamy Tomato Soup

Makes 4 servings

3 tablespoons butter	1 teaspoon sugar
1 pound, 9 ounces ripe tomatoes, preferably plum, roughly chopped	2 tablespoons shredded basil leaves
3 3/4 cups hot vegetable stock	Salt and pepper
2/3 cup milk or light cream	
1/4 cup ground almonds	

Melt the butter in a large saucepan. Add the tomatoes and cook for 5 minutes, until the skins start to wrinkle. Season to taste with salt and pepper. Add the stock to the pan, bring to a boil, cover and simmer for 10 minutes.

Meanwhile, under a preheated broiler, lightly toast the ground almonds until they are golden brown. This will only take 1-2 minutes, so watch them closely.

Remove the soup from the heat and place in a food processor. Blend the mixture to form a smooth consistency. Alternatively, mash the soup with a potato masher. Press the soup through a strainer to remove any tomato skin or seeds.

Place the soup in the pan and return to the heat. Stir in the milk or cream, ground almonds and sugar. Warm the soup through, and add the shredded basil just before serving. Transfer the soup to warm bowls and serve hot. ■
