Clearing the path to lower cholesterol

Do you have, or are you at high risk for, cardiovascular disease (CVD), also known as heart disease?

Are you not responding well enough to statin medications?

If so, you may be able to take part in the CLEAR Outcomes Study.

This study is looking at an investigational medication for patients with, or at risk for, CVD, who are also statin intolerant. Approximately 12,000 people will take part in this study to help doctors determine whether the investigational medication can help to reduce the occurrence of major CVD events, such as heart attacks and strokes. The study will also look at how safe the investigational medication is.

Would you like to take part?
 You may be able to take part in the CLEAR Outcomes Study if you:

- are at least 18 years of age, or the age considered an adult in your country, whichever is older, up to 85 years of age
- have a history of, or are at high risk for, CVD
- are statin intolerant (have not been able to tolerate one or more statins).

All study-related medication and assessments will be provided at no cost.

If you would like to learn more about this study, please contact the study team using the details provided.
