# SUMMER CAR CARE

## SUMMER CAR TIPS

### HOT INTERIOR?

Cool down more quickly by driving with the windows rolled down and the air cranked up, which forces out the hot air and allows the cool air to circulate. In a few minutes, when the air inside the car should be about the same temperature as the air outside, you're ready to roll up the windows.

### SCORCHING STEERING WHEEL?

Prevent burning your hands with this trick: Turn the wheel 180 degrees before getting out of the car. That way, the side you touch is safely in the shade while you're out.

### STINKY CAR?

A hot car can also mean a smelly car. To get rid of the odor, tape a dryer sheet onto the air conditioning. When you blast the AC, your ride will get a refresher too. Stash a box of dryer sheets under the passenger seat for convenience.

### BROKEN AC?

If your car's air conditioning isn't working or just needs an extra boost, try a solar-powered car fan. These tiny devices can be mounted on an open window, expelling hot air from the car while creating constant air circulation. Note: Tinted windows interfere with this gadget's function.

### ENGINE OVERHEATED?

Hot temperatures and low coolant levels increase the risk of your engine overheating, and your AC working overtime. If you see symptoms of an overheated engine—the temperature gauge rising; warning lights; steam billowing out from the hood—pull over to a safe place, turn off the engine, and wait at least a half hour for it to cool down fully before opening the hood. If your coolant levels are low, topping off the tank (it's the translucent plastic one) could do the trick, but if the tank is empty you might have sprung a leak and will need pro help.
