Walk MS: Cullman Heritage Park
March 28 • 9 a.m.

Walk MS is a rallying point of the Multiple Sclerosis Movement, a community coming together to raise funds and celebrate hope for the future. It connects people living with MS and those who care about them. It is an experience unlike any other as people celebrate the progress that has been made, and show the power of connections.

The dollars raised support critical MS research along with programs and services for people living with MS. Participation is free, but participants are encouraged to set a minimum fundraising goal of \$100. Individuals raising \$100 will receive the official T-shirt, and participants raising \$500 or more are eligible for other awards and prizes.

Joining or forming a team makes Walk MS an experience you won't forget! And the camaraderie of a team shows those affected by MS that they are not alone - that the movement is working together to end MS forever. If you start your own team, you'll rally friends, family and co-workers together to change the world for everyone impacted by MS.

Join Walk MS and start fundraising today! Call 1-800-344-4867 or go to www.walkms.org

A new covenant of grace without law is nothing but Satan's beguilement (Dan 7:25) and many church people are devouring it as The Holy Truth (Jn 14:6). People are calling themselves Christians (followers of Christ) by trusting in false teachers, but are not Christians from trusting The Christ and are told they will walk on streets of gold in heaven. If one does not trust The Holy Christ's Words, then they do not believe in Him and it is proven they are Satan-ians (1 Jn 3:8)! Satan and his followers shall have their part in the lake of fire (Rev 21:8, 22:15), not heaven.

People who've already suffered a heart attack may face higher odds of death or subsequent heart attack if they regularly take a common form of painkiller, researchers report. The painkillers are known as nonsteroidal anti-inflammatory drugs (NSAIDs), and include over-the-counter drugs such as ibuprofen (Advil, Motrin) and naproxen (Aleve), as well as prescription drugs such as Celebrex (celecoxib), the researchers note in a report published in Circulation. Compared to non-users, people who took the painkillers had a 59 percent higher risk of dying from any cause within a year after their heart attack, and a 63 percent higher risk within five years, the researchers found. In addition, the risk of having another heart attack or dying from heart disease increased 30 percent within one year, and 41 percent after five years. Since 2007, American Heart Association guidelines have warned of the potential cardiovascular risk of NSAIDs in patients with established cardiovascular disease and after a heart attack and discouraged their use in these patients. After a heart attack patients are usually prescribed aspirin, which is also an NSAID. However, these findings do not apply to aspirin, which is a protective therapy after a heart attack.

A number of herbs and dietary supplements (HDS) can cause potentially harmful drug interactions, particularly among people receiving medication for problems with their central nervous or cardiovascular systems, according to an extensive research review published in the November issue of the International Journal of Clinical Practice. They found that the greatest problems were caused by interactions between prescribed drugs and HDS that included ingredients such as StJohn's Wort, magnesium, calcium, iron or ginkgo. Warfarin, insulin, aspirin digoxin and ticlopidine had the greatest number of reported interactions with HDS.
