Most church people do not know it took The beast (Dan 7:25), pagan festivals (the great apostasy), man's commandments for doctrines (Mt 15:9), Protestantism, reprobate minds and theory teachers to create their church religion! These brought forth the changed times and laws most churches teach as Christian worship that requires them to be in a church on Sunday and worship Easter! And why their religion rejects The Biblical laws and Holy Days and most of Christ's Words (Jn 14:24), yet quote a few of His Words to make it appear they are doing as He saith! Believe all of The Holy Bible or be deceived by man's word, your choice! Man's ways or thoughts are not His, saith The Holy LORD (Is 55:8-9)! The Lord said take heed no man deceive you (Mt 24:4,5,11,24, Mk 13:6)! On Judgment day all will give account for their words (Mt 12:30-37)!

For years, infection rates from open fractures have remained stubbornly high. But a new study has found that infection rates can be reduced dramatically by giving patients antibiotics within the first hour of injury. The finding suggests that allowing paramedics to administer antibiotics in the field "may substantially improve outcomes for severe open fractures," according to a report in the Journal of Orthopaedic Trauma.

Among cigarette smokers not willing or able to quit smoking in the next month but willing to reduce with the goal of quitting in the next 3 months, use of the nicotine addiction medication varenicline (trade name Chantix) for 24 weeks compared with placebo produced greater reductions in smoking prior to quitting and increased smoking cessation rates at the end of treatment and at 1 year, according to a study in JAMA.

Ramibizumab, a prescription drug commonly used to treat age-related vision loss, also reverses vision loss caused by diabetes among Hispanic and non-Hispanic whites, according to a new study led by investigators from the University of Southern California (USC) Eye Institute. Diabetic retinopathy and diabetic macular edema are the leading causes of vision loss in working-age adults in the United States, according to the National Eye Institute. Laser surgery is the standard treatment for advanced stages of the disease, characterized by blurred vision, but previous research has shown that only 30 percent of patients saw improvement in their vision.
