A great multitude of people by many generations have differences in faith, because of false teachers (Dan 7:25, Mt 24:4, 2Cor11:13-15)! Many claim to be Christians, believe in Christ, yet reject what He saith. They claim The Bible is The Inspired Word of Elohim, then pick verses that can be twisted against Christ's Words. Efforts to get them to trust Christ's Words fall on deaf ears, but say you are only wanting to argue! Proven by The Bible their man made religion (Mt 15:9) is against The Words of Christ that are plainly written (Mt 5:17-19)! Their claim of believing faith in The Messiah is only to be saved (Rom 10:13) and without love of Christ (Jn 14:6,15,24). Definitely not the faith of oneness (Jn 17:11, 21-23)! So Be It!

Hospital Discount CENTRAL

Research has shown that a regular dose of aspirin reduces the long-term risk of cancer in those who are overweight in an international study of people with a family history of the disease in the Journal of Clinical Oncology.

If you are over age 75 and taking an anticoagulant, the old standard may be the gold standard, Mayo Clinic researchers and collaborators have determined, In a study released online in the BMJ, a team of researchers from Mayo Clinic, and other collaborators, showed that for older patients, particularly individuals greater than 75 years of age, the risk of gastrointestinal (GI) bleeding is 3 to 5 times higher when taking newer anticoagulant medications dabigatran or rivaroxaban compared to when using warfarin. Warfarin has been in use since the 1950s, and is an effective anticoagulant. Because it is so powerful and long acting, users are required to have regular blood tests to monitor the effects. Dabigatran and rivaroxaban are as effective as warfarin at preventing blood clots and reducing the risk of stroke and clotting complications, but do not require the regular monitoring. This convenience factor has resulted in an upswing in prescriptions for the newer medications as a replacement for warfarin. One of the most common reasons people take anticoagulant medication - which lessens the blood's tendency to clot - is to reduce potential or severity of clotting complications in patients with atrial fibrillation or venous thromboembolism. people with atrial fibrillation and venous thromboembolism have a much higher risk of strokes, heart attacks and clots in the lungs and legs, which can result in disability or death. Use of anticoagulants lessens the likelihood of stroke and other clotting complications, but brings a different set of risks, one of which is excessive bleeding due to reduced ability to form blood clots, Excessive GI bleeding in particular can itself be life threatening.

Their Smiles

Though their smiles are gone forever,
And their hands we cannot touch,
We still have so many memories,
Of the ones we loved so much.

Their memories are our keepsakes,
With which we'll never part.
God has them in His keeping,
We have them in our hearts.

Sadly missed but never forgotten.

Doyal and Colleen Campbell

IN LOVING MEMORY

It broke our hearts to lose you, but you did not go alone. A part of us went with you, the day God took you home. If tears could build a stairway, and heartaches make a lane, we'd walk our way to Heaven and bring you back again. In life we loved you dearly, in death we love you still. In our hearts you hold a place no one could ever fill.
