Pre-planning prior to an illness is less emotional; therefore resulting in more practical decisions.
- **Make Your Wishes Known**
Pre-plan as many details as you so desire.

It was given unto the beast to think to change times and laws (Dan 7:25)! Why? To try the love of all mankind! Roman emperor Aurelian Augustus built a temple of the sun and established a holiday of Saturnalia Dec 17-25th, 274 C.E. for the birth of Sol Invictus the unconquered Sun! The apostasy church desired this pagan feast and deceived the people to accept it, for the nativity of Christ. Many born again protestant churches hold the deception as truth and testify of Christ, but cannot obey Him (Jn 5:39-47)! Who desires The Truth ask (Mt 7:7-8), then read for yourself. The Bible does not reveal the date of Christ's birth, proving it is created by man (Mt 15:9)! The Holy Messiah (Lord) said to take heed that no man deceive you (Mt 24:4-51, 2Cor 11:13-15, 1Jn 3:8). So be It!

Immunotherapy with the anti-PD-1 antibody pembrolizumab (Keytruda) was effective in one out of four patients with recurrent or metastatic head and neck cancer, according to results presented at the 2015 meeting of the American Society for Clinical Oncology. Pembrolizumab decreased the size of tumors by 30 percent or more in 24.8 percent of 132 patients, making it nearly twice as effective as the current preferred treatment using platinum-based chemotherapy plus cetuximab, an epidermal growth factor inhibitor.

The U.S. Food and Drug Administration has approved Rexulti (brexipiprazole) tablets to treat adults with schizophrenia and as an add-on treatment to an antidepressant medication to treat adults with major depressive disorder (MDD). Schizophrenia is a chronic, severe, and disabling brain disorder affecting about one percent of Americans. Typically, symptoms are first seen in adults younger than 30 years of age and include hearing voices; believing other people are reading their minds or controlling their thoughts; and being suspicious or withdrawn. MDD, commonly referred to as depression, is also a severe and disabling brain disorder characterized by mood changes and other symptoms that interfere with a person's ability to work, sleep, study, eat and enjoy once-pleasurable activities. Episodes of depression often recur throughout a person's lifetime, although some may experience a single occurrence. Other signs and symptoms of MDD include loss of interest in usual activities; significant change in weight or appetite; insomnia or excessive sleeping (hypersomnia); restlessness/pacing (psychomotor agitation); increased fatigue; feelings of guilt or worthlessness; slowed thinking or impaired concentration; and suicide attempts or thoughts of suicide. Not all people with MDD experience the some symptoms.
