The Holy Father gave His Holy Word to be lived and changed not (Mal 3:6), Christ The Truth (Jn 1:14, 3:16, 14:6), the same yesterday, today and forever (Heb 13:8) and The Holy Ghost, The Truth in Spirit (Jn 14:16-26) and The Three are one (1Jn 5:7)! Many claim to preach the Holy Gospel of Truth, yet do not seek to destroy the devil's work (1Jn 3:8-9). A different Gospel of Christ is not in Truth and is vain worship (Mt 15:9), taught by Satan and his ministers (Mt 16:23, 2Cor 11:13-15)! The Holy Writings are a witness against them (Mt 4:4-10, Lk 4:4-8)! So Be It! Ron & Jeri

Rupture of an abdominal aortic aneurysm is one of the most dramatic medical emergencies a person can face. It usually strikes without warning, killing approximately 50 percent of those who experience it before they reach a hospital. Of those who do get to a health facility alive, only about 50 percent survive. When diagnosed through screening, aortic aneurysms are carefully monitored for signs of enlargement, and surgical intervention often is needed to prevent rupture of the vessel. Now, researchers have found that patients who took cholesterol-lowering statins before endovascular surgery experienced fewer complications and better outcomes.

A new study published in The Lancet Neurology tested two generic versions of lamotrigine, a drug widely used for the treatment of epilepsy, and found no detectable difference in clinical effects among patients in the trial.

The U.S. Food and Drug Administration has approved Genvoya (a fixed-dose combination tablet containing elvitegravir, cobicistat, emtricitabine, an tenofovir alafenamide) as a complete regimen for the treatment of HIV-1 infection in adults and pediatric patients 12 years of age and older. The CDC estimates that 1.2 million persons ages 13 years and older are living with HIV infection, and that more than another 150,000 persons in this age range have HIV but are unaware of their infection. Over the past decade, the number of people living with HIV has increased, while the annual number of new HIV infections has remained relatively stable.
