ROOF SNOWFALL

If you've had a big snowfall in your area and you're wondering if your roof can stand the extra weight, don't reach for a ladder and a shovel — reach for the telephone. Calling in a professional to remove ice and snow from your roof is the smartest — and safest — option.

When (If Ever) is it Necessary?

The critical factor in determining excessive snow loads on your roof isn't the depth of the snow, it's the weight, says home improvement experts.

That's because wet snow is considerably heavier than dry, fluffy snow. In fact, six inches of wet snow is equal to the weight of about 38 inches of dry snow.

The good news is that residential roofs are required by building codes to withstand the heaviest snows for that particular part of the country.

"Theoretically, if your roof is built to code, it's built to support more than the normal load of snow and ice,"

You can determine the type of snow you're getting simply by lifting a few shovelfuls — you

should be able to quickly tell if the current snowfall is wet or dry. Local winter storm weather forecasts should alert you to the possibility that snow loads are becoming excessive and a threat to your roof.

How Do I Know There's a Problem?

An indication that the accumulated snow load is becoming excessive is when doors on interior walls begin to stick. That signals there's enough weight on the center structure of the house to distort the door frame.

Ignore doors on exterior walls but check interior doors leading to second-floor bedrooms, closets, and attics in the center of your home. Also, examine the drywall or plaster around the frames of these doors for visible cracks.

Homes that are most susceptible to roof cave-ins are those that underwent un-permitted renovations. The improper removal of interior load-bearing walls is often responsible for catastrophic roof collapses.
