Many self called Christians tell their children to trust The Bible and teach of Christ, yet deny the principle of righteousness. If Moses' law is denied, then Christ is denied (Deut 18:18, 34:10, Jn 5:46-47, Acts 3:18-26, Rom 3:25). Claiming to be Christians and Christ is Lord (Lk 6:46), yet not obeying Him (Mt 16:22-24) is an antonym. Fabrications of so called Christian churches cause them to split off from each other (250 in Cullman). Many believe in their church (Psalm 127:1, Lk 12:49-53), yet worship the beast (Dan 7:25, Rev 19:20, 20:10). So Be It! Ron & Jeri

L to R: Tammy, Anna, Dr. Marshall, Dr. Stidham, Sherri and Diane

In honor of breast cancer awareness month, Signature Smiles of Cullman is raising money in hopes of finding a cure through breast cancer research. During the month of October, Dr. Marshall and Dr. Stidham will be having a friendly competition to raise

these donations. Each doctor will have a donation jar at the office, and whoever raises the least money will participate in a fun activity chosen by the other doctor, which will be recorded and posted on social media. Thank you in advance for your support!!!

Older adults might want to avoid a using class of drugs commonly used in over-the counter products such as nighttime cold medicines due to their links to cognitive impairment. Using brain-imaging techniques, researchers found lower metabolism and reduced brain sizes among study participants taking the drugs known to have an anticholinergic effect, meaning they block acetylcholine, a nervous system neurotransmitter. Previous research found a link between the anticholinergic drugs and cognitive impairment and increased risk of dementia. The new paper, published in the journal JAMA Neurology, is believed to be the first to study the potential underlying biology of those clinical links using neuroimaging measurements of brain metabolism and atrophy.

A new analysis of 204 studies involving more than 1.4 million people suggests that metformin, the most frequently prescribed stand-alone drug for type 2 diabetes, reduces the relative risk of a patient dying from heart disease by about 30 to 40 percent compared to its closest competitor drug, sulfonylurea. The study, designed to assess the comparative-not absolute or individual-benefits and risks of more than a dozen FDA- approved drugs for lowering blood sugar in type 2 diabetes, is described in the April 19, 2016 issue of the Annals of Internal Medicine. Diabetes now affects almost 10 percent of the U.S. population and poses a growing public health threat. Most people with the condition will eventually need drug treatment, the researchers say.
