Many church ministers (2Cor 11:13-15) teach whatsoever is asked in Jesus' Name will be given (Jn 14:13-14, Rom 10:13). Yet teach what Christ The Holy Truth (Jn 14:6) said about not changing The Holy Covenant (law) is for Jews, not Christians (Mt 4:4, 5:17-19, 16:22-24, Acts 3:23, Heb 13:8, Jn 5:14,8:11,1Jn 3:8-10). Most Church Christians are taught they are not under law yet can sin and are promised life (Gen 3:4-5, Ezek 13:22). So Be It!

### SHOP TODAY'S LOW PRICE TAGS:

We have HUNDREDS of non-advertised items marked down throughout our entire store. More savings passed on to our customers. Just look for blue tags on the shelves.

### NO LIMITS:

Our competitors also have advertised specials. The difference is, in most cases, they have a limit on how many of an item you can buy at the sale price...we don't have any limits to family shoppers.

**Pictured L-R: Vanessa Patton, Becky Cook, Becky Burks and Rex Smith, RPH**

The U.S. Food and Drug Administration has approved Dupixent (dupilumab) injection to treat adults with moderate-to-severe eczema (atopic dermatitis). Dupixent is intended for patients whose eczema is not controlled adequately by topical therapies, or those for whom topical therapies are not advisable. Dupixent can be used with or without topical corticosteroids. Atopic dermatitis, a chronic inflammatory skin disease, is often referred to as "eczema," which is a general term for several types of inflammation of the skin. Atopic dermatitis is the most common of the most common of the many types of eczema; onset typically begins in childhood and can last through adulthood. The cause of atopic dermatitis is a combination of genetic, immune and environmental factors. In atopic dermatitis, the skin develops red, scaly and crusted bumps, which are extremely itchy. Scratching leads to swelling, cracking, "weeping" clear fluid, and finally, coarsening and thickening of the skin.

Pembrolizumab, an antibody drug already used to treat other forms of cancer, can be effective in the treatment of the most common form of mesothelioma, according to a new study published in The Lancet Oncology. Malignant pleural mesothelioma is a rare and aggressive cancer that represents about 90 percent of all malignant mesothelioma cases. It's primarily caused by the inhalation of asbestos, a fiber commonly found in some forms of insulation, vinyl floor tiles, and other material. Tumors form in the pleura, a thin membrane of cells that line the lungs and chest wall. Most patients survive less than a year. This poor prognosis is partially due to the fact that most patients are not diagnosed until they are already at a late stage of the disease. The standard first-line therapy treatment involves chemotherapy, and currently there is no approved second therapy.
